

Topics in Geometry I
Course Outline
Course 9114001 Section 01, Spring 2022
12:00 - 14:50 for July 14, 15, 18, 19, 20
15:00 - 17:50 for July 21, 22, 25, 26, 27
09:00 - 11:50 for July 28, 29, August 01, 02, 03
Room: E1-1 #140
Chungbuk National University

Instructor: Dr. Byungdo Park

Email: byungdo@g.cbnu.ac.kr

Office hours: By appointment.

Class webpage: Announcements, homework, exam schedules and other relevant information will be posted on the following webpage: https://byungdo.github.io/teaching/s2022_tig1.html which is also accessible via instructor's webpage: <https://byungdo.github.io/>

Prerequisites: Undergraduate courses Differential Geometry I (7412005) and Differential Geometry 2 (7412006). Geometry for teachers 1 and 2 (7412074, 7412075) are recommended. The instructor does not dissuade students without meeting the prerequisite criteria registering for this course at his/her own risk.

Course description: We shall review differential geometry of curves and surfaces through problems while revisiting also Euclidean, non-Euclidean, and projective geometry. Seeking connections between differential geometry and classical geometry as well as a reflection to secondary school geometry curricula is of particular interest. While doing so, we shall train ourselves for an ability of lucidly explaining and communicating logical thoughts on given problems to amplify teaching skills. Considering that this is a graduate-level course, we will also be interested in looking at panoramas of contemporary geometries such as Riemannian, symplectic, metric, and complex geometries. The overall goal is to help students to get armed with a strength in microscopic details as well as a bird-eye view of the subject.

Course objectives: At the end of the course students should be able to:

- Solve problems in differential geometry precisely and promptly.
- Clearly communicate ideas and logic for addressing given problems.
- Understand where to fit each topic learned in geometry courses (including this one) in historical timeline.
- Think about topics learned in geometry courses (including this one) in connection to the curricula in secondary mathematics education.

Details on problem solving: Problems arising in this course will be requiring proofs and calculations based on the mathematical discourse in class and/or the subjects students are supposed to know already. Through dialogues and discussions during each lecture as well as the instructor's office hours, the instructor will guide students approaching to problems that they will have to address.

Details on class proceeding: On every class meeting day, there will be a 25-minute quiz and followed by a discussion on quiz problems. Students should be able to present their solutions and logically communicate. We shall exchange helpful feedback to improve teaching skills of all of us. In a situation that this course has to run online, then every class meeting will consist of the following components.

- An introductory lecture followed by an in-class problem session (Problem session: 25-minute long).
- Going over the problems from the problem session.
- An in-class quiz (25 minutes).
- Going over the quiz problems from the previous day.

Grading policies: 78% from final exam, 14% from in-class quiz, and 8% from attendance. Absolute evaluation [A: 100–80 points, B: 79.99–70 points, C: 69.99–60 points, D: less than 60 points] with curving. Here the curving means a horizontal shift of the bell-shaped curve of %-score distribution. For example, if your final score is 59/100 and the curving constant is +20, then it is impossible for you to expect a grade A. Grading policies in the academic integrity policies are applied in higher priority than the above grading policies.

Assessment through quizzes: There will be total fourteen 25-minute long in-class quizzes. The instructor does not care whether or not you copy your solutions of other students and/or internet sources. If you want to learn more from others or through internet while working on your quizzes, please go ahead. You will get 1% of total score if you hand-in a quiz showing your work and 0% if not. The instructor will respond only once to your quiz submission emails just to acknowledge that there is no issue in email communication, but you are welcome to send email inquiries. Each quiz will consist of two problems and the style of questions will be similar to those of Public Secondary School Teacher Employment Exam.

Attendance policies: Attendance data will be collected in every class meeting and will be used for determining your final grade. You will get a grade F if you have missed more than 25% of class meeting hours. Up to 1 hour of absence there is no penalty on your score. After that, you lose 1% of total score for an absence to each 50-minute long class meeting, with a maximum total loss 8% from your total score. If you have permissible reasons for your absence in accordance with the Regulation on Academic Management of the CBNU Article 52(1) (충북대학교 학사운영규정 제52조(공결승인) 제1항), you will need to contact the Department Assistant to follow the procedure for getting an approval on your absence bringing proper documentation as proof. That said, you have to fill out a form and submit it along with appropriate proofs before the absence or after seven days of the date of absence.

Assessment of learning: The assessment will be primarily done by the abovementioned grading policy. Nonetheless, the instructor will also take into account students' devotions and efforts for this course as well as their enthusiasm as a future educator so that those qualitative elements are not going to be neglected.

Weekly lesson plan:

Week 1: Weekly quiz and review. Basics on smooth curves.

Week 2: Weekly quiz and review. Torsion and curvature, Frenet formulae (1)

Week 3: Weekly quiz and review. Torsion and curvature, Frenet formulae (2)

Week 4: Weekly quiz and review. Additional topics from curves.

Week 5: Weekly quiz and review. Local theory of surfaces (1)

Week 6: Weekly quiz and review. Local theory of surfaces (2)

Week 7: Weekly quiz and review. Local theory of surfaces (3)

Week 8: Weekly quiz and review. Local theory of surfaces (4)

Week 9: Weekly quiz and review. The Gauss theorem of Egregium.

Week 10: Weekly quiz and review. Geodesic curvature, geodesics.

Week 11: Weekly quiz and review. Gauss-Bonnet theorem.

Week 12: Weekly quiz and review. Applications of topics we have learned.

Week 13: Weekly quiz and review. Applications of topics we have learned.

Week 14: Weekly quiz and review. Final summary of topics we have learned.

Week 15: Final exam.

Accommodating disabilities in learning and assessment: The instructor is committed to providing access to all students. If you need accommodation in classroom or in assessment, you are encouraged to set up an appointment with the instructor at your soonest availability so that we can figure out the best way to accommodate you. Possible accommodations include, but not limited to, provision of materials from lectures, permission to hire an assistant for taking notes, audio-recording lectures, and aid/assistant devices, extension of due dates for assignments, alternative assessment for in-class presentations, extension of exam hours, and provision of an accommodating exam locations and exam sheets.

Academic integrity: It is expected that you will complete all exams without giving or receiving help from anyone. Electronic devices are not allowed in any in-class exam. You may talk to other students about the homework but you must then complete the homework yourself. The grader will trust students and will not apply any prejudice. However, if the grader has found an evidence that you have violated those policies, the grader reserves the right to investigate by summoning you to come in to his office, reproduce and explain your own solutions in front of the chalkboard. If you cannot provide a coherent and consistent explanation to your own solution to a problem or do not show up to the investigation without a documented official cause and/or an emergency, the minimum punishment would be score zero to that problem and lowering your letter grades by 2 letters. (For example, if you were to receive A+, it will become C+.) In addition to that, your other homework solutions may possibly be a subject of investigation. The investigation session will be both video and audio recorded, and the result of the investigation (including video/audio recording of the investigation) can be reported to the department or the university center. You **MUST** drop this course if you cannot comply with this policy.

Email policies: All emails addressed to the instructor should have a title containing the course title, name, and a brief summary as well as a body starting with "Dear Professor Last name" and ending with "Sincerely, Your full name", which contains greetings, your name and department, a brief and clear purpose written politely. Any email deviating from this format will not be accepted and will be dismissed without any rejection reply. The corresponding disadvantages are solely and entirely on the student.

이메일 작성규칙: 담당교수에게 보내지는 모든 이메일의 제목에는 과목명, 신원, 요지가 포함되어 있어야 하며, 본문은 반드시 “OOO 교수님께”로 시작하여 인사, 신원, 용건을 간단 명료하고 예의 바르게 기술한 후 “OOO 올림” 또는 “OOO 드림”으로 끝나야 합니다. 이 형식에 어긋난 이메일은 접수하지 않으며, 반려회신 없이 종결합니다. 이에 따른 불이익은 전적으로 학생의 단독 책임입니다.

English usage policies: Lectures in this course will be given in Korean, but most of written materials will be in English. For example, the course syllabus, most of boardwork, exam problems, homework, solutions to exams, course webpage, announcements, but not limited to those. English sentences to be used in this course should be understandable enough based on the regular Korean public high school curriculum. Nonetheless if your English skill is not competent enough to follow this course or understanding announcements, it is your responsibility to ask the instructor to also provide an explanation in Korean. The instructor will take those questions under an attitude of helping students' understanding, but taking into account the contents of each question, he may reject the question or advise the questioner to visit him during his office hour to ask the question about Korean translation.

영어 사용 정책: 본 강좌에서 강의는 한국어로 이루어지지만, 글의 경우 대부분 영어가 사용될 것입니다. 수업계획서, 칠판 판서의 대부분, 시험문제, 숙제, 시험문제에 대한 풀이, 강좌의 웹페이지, 공지사항 등이 예가 될 수 있으며, 이상 열거한 것들로 한정되지 않습니다. 본 강좌에서 사용될 영어 문장들은 한국의 공립 고등학교 정규 교과과정을 기초로 할 때 충분히 이해될 수 있어야 합니다만, 만약 수강생 본인의 영어실력이 본 강좌를 따라오거나 공지사항을 이해하기에 충분치 못하다면, 담당 교수에게 한국어로 추가 설명을 요청하는 것은 학생 본인의 몫입니다. 담당 교수는 학생들의 이해를 도우려는 자세로 질문을 받을 것이지만, 질문의 내용에 따라 답을 하지 아니할 수도 있고, 면담시간에 개별 방문하여 질문하도록 안내할 수도 있습니다.
